

Welcome To

Labanodes.com

Labanodes opens up a world of boundless possibilities by surpassing the constraints of conventional finance. Enter Labanodes' dynamic environment and get a firsthand look at the cutting edge of bitcoin innovation.

Who We Are

ABOUT US

Introducing LabaNodes Staking: Investing in and Strengthening Digital Assets!

We're glad you found LabaNodes, your reliable partner in the worlds of blockchain technology and decentralised finance (DeFi). We at LabaNodes are enthusiastic about coming up with new ways to help our users reach their full potential in the digital economy, which is changing quickly.

We specialise in safe and dependable staking services for a number of well-known coins, such as **SUI (SUI)**, **POLYGON**, **OPTIMISM (OP)**, **SONIC (S)**, **APTOS (APT)**, **COSMOS (ATOM)**, **NEAR PROTOCOL (NEAR)**, **OSMOSIS (OSMO)**, **ARBITRUM (ARB)**. If you stake with LabaNodes, you can make silent income and help keep these blockchain networks safe and stable at the same time.

Besides our staking services, we also have a number of community and prize programmes that are meant to thank our regular users. This site, LabaNodes, has something for everyone, from experienced investors to people who are new to DeFi.

Process

HOW TO GENERATE CRYPTOCURRENCY

Cryptocurrency is generated through a process called mining, where powerful computers solve complex mathematical problems to validate and record transactions on a decentralized network, such as blockchain, in exchange for newly minted coins as rewards.

Cosmos Atom

COSMOS ATOM

A major concern for some in the crypto industry centers on the levels of fragmentation seen in blockchain networks. There are hundreds in existence, but very few of them can communicate with each other. Cosmos aims to turn this on its head by making this possible.

Cosmos is described as “Blockchain 3.0” — and as we mentioned earlier, a big goal is ensuring that its infrastructure is straightforward to use.

Osmosis

OSMOSIS

Osmosis has customizable liquidity pools. Unlike Uniswap, where LPs can provide liquidity only to a two-token pool with an equal ratio, Osmosis allows for providing liquidity to pools with several tokens and unequal ratios.

Coordination between stakeholders is of equal importance, which is why liquidity pool shares on Osmosis are not only used to calculate the fractional ownership of a liquidity pool, but also the right to participate in the strategic decision-making of the liquidity pool as well.

SONIC

SONIC

Sonic is a groundbreaking blockchain project revolutionizing how developers and users interact with decentralized technology.

It operates as a high-performance platform capable of processing more transactions than leading blockchains combined, while maintaining robust security and user-friendly features.

The platform stands out by offering developers unprecedented rewards of up to 90% of their application fees and seamless integration with Ethereum's established ecosystem.

POLYGON

Polygon is self-described as a Layer 2 scaling solution, which means that the project doesn't seek to upgrade its current basic blockchain layer any time soon.

Polygon uses a customized version of the Plasma framework which is built on proof-of-stake checkpoints that run through the Ethereum main-chain.

Sui

SUI 

Sui's innovative architecture offers low-latency transactions with stable transaction fees, high throughput through horizontal scaling and parallelized execution, and empowers developers with powerful capabilities and tools to craft the next generation of Web3 applications.

At the heart of Sui's uniqueness lies its object-oriented design, offering a new way of developing on blockchain. Offering powerful capabilities in a way that ensures deep composability with important developer and user safety measures.

Near

NEAR

NEAR uses its Nightshade technology to improve transaction throughput massively. Nightshade is a variation of sharding, in which individual sets of validators process transactions in parallel across multiple sharded chains, improving the overall capacity of the blockchain. In contrast to “regular” sharding, shards in Nightshade produce a fraction of the next block, called “chunks.” In doing so, NEAR Protocol is able to achieve up to 100,000 transactions per second and achieve near-instant transaction finality thanks to a one-second block cadence while simultaneously keeping transaction fees at virtually zero.

OP

Optimism

OPTIMISM

Optimism aims for the minimum number of moving parts while building a layer-two solution for Ethereum. In practice, this means using proven Ethereum code and infrastructure when possible. Optimism thus aims to keep its code as simple as possible and work directly with existing codebases.

Transactions are submitted to Ethereum without direct proof of validity and can be challenged for a certain period of time (currently seven days). After that, a transaction is considered final. That is why withdrawals from Optimism to Ethereum take seven days to complete.

A large graphic on the left side of the page. It features a red curved shape on the far left. To its right are four horizontal black bars of varying lengths, each with a white, stylized wave-like shape cut out from its center. The background is a light blue gradient with faint, concentric circular lines.

Aptos

APTOS

For a start, the Aptos team claims that its network can process over 150,000 tps. By comparison, Ethereum's mainnet tps is around 12 to 15.

This high transaction throughput is possible through a parallel execution engine (Block-STM) — a byzantine fault-tolerant (BFT) PoS consensus mechanism. For context, most blockchains execute transactions sequentially, which means that a single failed transaction or high demand on the network could hold up the entire chain.

ARB

ARBITRUM

Arbitrum uses optimistic rollups to stand out from other scaling solutions for Ethereum. It claims to offer several advantages over other optimistic rollup solutions, such as:

Compatibility: Arbitrum supports unmodified EVM contracts and transactions, meaning that any existing Ethereum DApp can run on Arbitrum without any code changes.

Scalability: Arbitrum can handle thousands of transactions per second with low fees and fast finality, while maintaining the security guarantees of Ethereum.

DIVIDEND PERKS

Subscribers will receive a lucrative **72%** Annual Percentage Yield (APY) rewards on their chosen initial package, with the potential to triple their cumulative earnings.

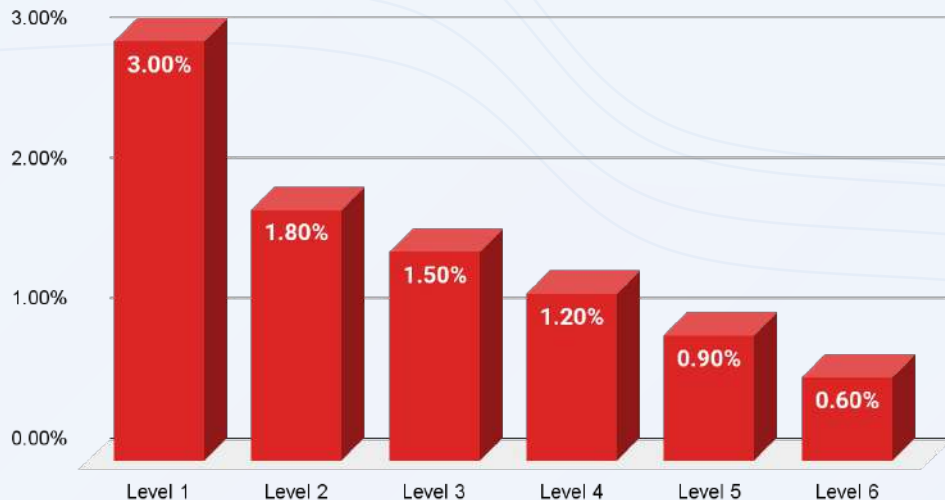

All staking income and other rewards will be credited autoally in your given Blockchain Address thrice in a month on 5, 15 and 25

1. The user can withdraw the principal amount after 27 months.
2. After the account is permanently closed, the user can no longer claim any income..

AFFILIATION INCOME

If you want to enjoy using LabaNodes, share your referral link with your friends and colleagues to earn income of their revenue.

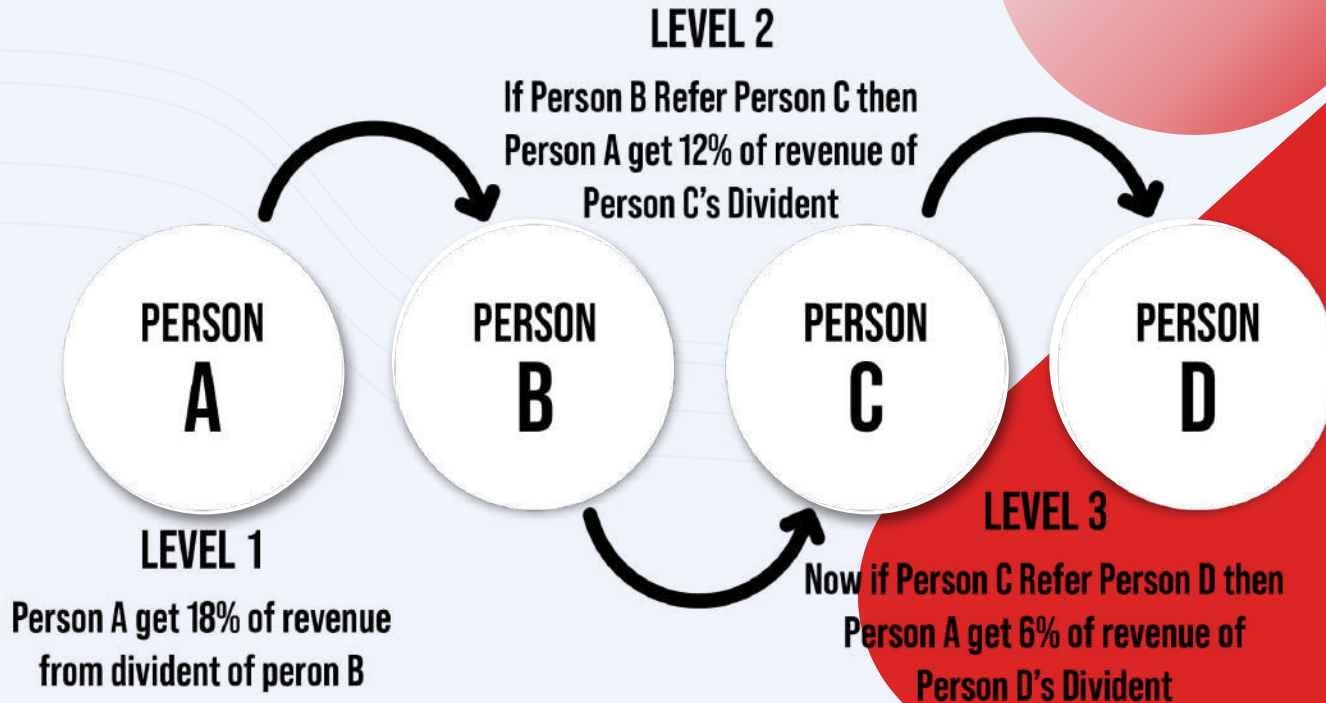

For Example

Unilevel Compensation Structure

As mentioned above, unilevel compensation eligibility for a distributor is limited upto **6** business levels as per LabaNodes regulations. The commission payment varies for each business level.

COMMUNITY REVENUE STRUCTURE

Levels

INFINITY BONUS

An **infinity bonus** is a reward system where the company's cumulative monthly revenue will be distributed among the **Labanodes** community for a eternity.

How is the Infinity Bonus Distributed?

The Infinity Bonus is allocated based on qualification tier, with estimated earnings as follows:

Tier 1 Qualifier

Requirement: Refer 5 direct fellows and generate \$7,500 in business volume across any 3 lines — \$2,500 in each line, counted up to infinity.

Reward: Earn a minimum of \$75 per month for a eternity.

Tier 2 Qualifier

Requirement: Refer 10 direct fellows and generate \$60,000 in business volume across any 3 lines — \$20,000 in each line, counted up to infinity.

Reward: Earn a minimum of \$775 per month for a eternity.

Tier 3 Qualifier

Requirement: Refer 15 direct fellows and generate \$1,95,000 in business volume across any 3 lines — \$65,000 in each line, counted up to infinity.

Reward: Earn a minimum of \$3,375 per month for a eternity.

The cumulative revenue from the 1st to the 30th of each month will be credited to the community's designated blockchain address on the 5th of the following month.

Existing achievers will get rewards under the current system till Dec 31, 2025. After that, if not switched to the new Infinity system, rewards will lapse. Conditions will be same in the future.

How to Get

WITHDRAWAL

You can stake in **SUI (SUI), POLYGON , OPTIMISM (OP), SONIC (S), APTOS (APT), COSMOS (ATOM), NEAR PROTOCOL (NEAR), OSMOSIS (OSMO), ARBITRUM (ARB).**

*User will need to capture the receiving address of above mentioned Blockchain Addresses only and that will one chance to capture the Blockchain Receiving Address ,enter Blockchain Address carefully, once submitted never changed. All staking income and other rewards will be credited autoally in your given Blockchain Address thrice in a month on 5,15 and 25.

Note- You will get **SUI (SUI), POLYGON , OPTIMISM (OP), SONIC (S), APTOS (APT), COSMOS (ATOM), NEAR PROTOCOL (NEAR), OSMOSIS (OSMO), ARBITRUM (ARB)** equivalent value of USDT.

Our Features

ADVANTAGES WITH **LABANODES**

LabaNodes is a leading platform for cryptocurrency staking, specializing in coins like **SUI (SUI), POLYGON , OPTIMISM (OP), SONIC (S), APTOS (APT), COSMOS (ATOM), NEAR PROTOCOL (NEAR), OSMOSIS (OSMO), ARBITRUM (ARB)**. Our platform is designed to simplify the staking process, offering guaranteed returns, affiliation bonuses, royalties, and other benefits. We provide a user-friendly interface, expert guidance, and a range of tools to help customers make informed decisions. With LabaNodes, customers can stake with confidence, knowing that their investments are secure and that they're maximizing their returns.

Moreover, LabaNodes offers a unique opportunity for customers to earn passive income through our community program. This program allows customers to earn ongoing income based on the performance of their staked assets. With LabaNodes, customers can benefit from their investments over the long term, enjoying a reliable source of revenue. Our platform is built on cutting-edge technology, ensuring the highest levels of security and reliability. With LabaNodes, customers can stake with confidence, knowing that they're maximizing their returns while minimizing risk.

How to Enter

LET'S START

- *Deposit at least \$45 into your LabaNodes account to activate Premium Referral Code.

- *Generate a referral code that is tied to your web3 wallet. Share it and spread the LabaNodes word!!

Earn income of the revenue that your referrals bring to LabaNodes.

- *User must keep into mind , affiliation income would be 6X of their initial amount they invested with LabaNodes. After that user will re-invest the account to continues earning with LabaNodes.

- *Daily capping of income would be equivalent their current package.

LabaNodes, has put together a bespoke hardware solution to make SUI (SUI), POLYGON , OPTIMISM (OP), SONIC (S), APTOS (APT), COSMOS (ATOM), NEAR PROTOCOL (NEAR), OSMOSIS (OSMO), ARBITRUM (ARB) staking easy and convenient.

We offer solutions to cater for different needs.
